

MCP4024 - SSH Shell

Tom Schaefer

Better Software Solutions, Inc.

Run commands on Linux systems from WFL

- Using SSH Shell, execute commands on remote Linux system
- Must set CANDE LAISSEZFILE to 6 (Yes, I know. It has been UCF'ed).
- To avoid password, create a key in Security Center
- Pass remote username with l parameter, key with -i parameter and IP of remote system.
- ```
param := "ssh -l tschaefer " & % tschaefer is remote user
 "-i SSH_BIGIP " & " -v " & sIP & " " &
 "tcpdump " & TCPDUMPOPTIONS & % Command to run
 TCPDUMPFILTER &
 " -w /var/tmp/" & pcapName % End of command
run *system/sshclient/admin("ENABLE"); % Check this is set since last H/L

display param;
run *system/sshclient (param);
```
